Education

Gogte Institute of Technology
B.Tech in Electrical and Electronics Engineering

Belgavi, Karnataka
Aug 2018 - Jun 2021

Experience

Accenture
Software Engineer

Dec 2024 - Present
Bangalore, India

- Architected a cloud-native, event-driven serverless orchestration platform on AWS (Lambda, API Gateway, Step Functions, SNS, S3, DynamoDB) to process insurance document workflows, scaling to **millions of asynchronous events/month with high reliability**.
- Designed and implemented resilient request validation and transformation layers using AJV and TypeScript, **reducing downstream API failures by ~40%** and ensuring contract-safe integrations with third-party systems.
- Optimized production-grade Node.js services with comprehensive Jest test coverage (**~99% unit coverage**), improving release stability and lowering post-deployment defects by **30%+**.
- Automated infrastructure provisioning and CI/CD using Terraform and GitHub Actions with secure secrets management, **cutting deployment time by ~60%** and enabling repeatable, audit-ready releases across environments.
- Improved observability and fault detection by integrating Dynatrace and CloudWatch for distributed tracing and monitoring, **reducing mean time to resolution (MTTR) by ~35%** across serverless components.

Accenture
Associate Software Engineer

Dec 2022 - Nov 2024
Bangalore, India

- Designed and scaled a serverless rating microservice on AWS (Lambda, API Gateway) to power insurance Rate-Quote-Issue flows, **handling high volume concurrent policy evaluations with 99.9% availability**.
- Implemented secure cross-account data exchange between trusted and standard AWS environments using IAM role assumptions and REST APIs, **eliminating manual handoffs and improving data accuracy by ~35%**.
- Optimized policy request storage and retrieval with DynamoDB access patterns, **reducing end-to-end rating latency by ~25% during peak load**.
- Strengthened platform security and observability by integrating Cognito authentication, VPC isolation, and centralized monitoring via CloudWatch and S3, **cutting security-related incidents by ~40%**.
- Automated cloud infrastructure and deployments using Terraform and CI/CD pipelines, **reducing environment provisioning time by ~50%** while maintaining reliable Node.js/TypeScript services with Jest-based test coverage.

Projects

Xpenzi
Full Stack Expense Management Platform

Code Link

Stack: Next.js, React, Tailwind CSS, Clerk, Shadcn UI, Node.js, API Routes, Prisma, PostgreSQL, Prisma Migrate, Docker, GitHub (Actions), ESLint, Prettier

- Group expense tracking breaks down when shared costs, partial splits, and settlements are handled manually or across tools.
- Xpenzi centralizes group expenses, splits, balances, and settlements into a single, structured workflow.
- Built with a typed schema, transactional data model, and server-driven logic to ensure accuracy at scale.
- Delivers clear balances, faster settlements, and reduced friction for real-world shared spending scenarios.

Ved Janani
Full Stack LMS Platform

Code Link

Stack: TypeScript, Node.js, Tailwind CSS, Clerk, Frammer Motion, AWS, Docker, Lambda, Clerk, DynamoDB, ECR, S3, Shadcn

- Fragmented learning tools make course management and progress tracking inconsistent across learners and educators.
- Ved-Janani unifies courses, users, and learning progress into a single, structured LMS workflow.
- Built with a full-stack TypeScript architecture and REST APIs to support scalable content delivery and role-based access.
- Enables centralized learning management, smoother course flow, and reduced operational overhead.

Personal Portfolio Website
Frontend Web Application

Code Link

Figma Link

Stack: Next.js, Typescript, Tailwind CSS, GSAP, Frammer Motion, lenis-motion, Vercel

- Traditional resumes fail to convey technical depth, design thinking, and real project impact.
- The portfolio delivers an interactive, motion-driven experience to present projects, skills, and design work.
- Built using Next.js, TypeScript, Tailwind CSS, and advanced animation stacks (GSAP, Frammer Motion, Three.js) for performance-first UI.
- Improves personal visibility and engagement through fast, responsive, and visually consistent design-to-deployment flow.

Technical Skills

- Languages: HTML/CSS, JavaScript, TypeScript
- Frameworks: Node.js, Express.js, React, Next.js, Tailwind CSS, SCSS, Jest, Nunjucks, Serverless
- Developer Tools: Git, Github, Github Actions, Github Workflow, Postman, Terraform, AWS CLI, Bash, JIRA, Rally, VSCode, Visual Studio
- Libraries: Shadcn-UI, Material-UI, GSAP, Frammer Motion
- Others: AWS (Lambda, DynamoDB, S3, API Gateway, IAM, Cognito, KMS, Secrets Manager, SNS), RestAPI, Kafka, CI/CD
- Design and Creative Tools: User Interface (UI), User Experience (UX), Figma, Graphic Design, Adobe PhotoShop, Adobe Illustrator, Digital Art
